

## TESTS

## RECALL TEST

- 1 What is meant by 'temperature'?  
\_\_\_\_\_ (2)
- 2 What is meant by 'heat energy'?  
\_\_\_\_\_ (2)
- 3 What is 'specific heat capacity'?  
\_\_\_\_\_ (2)
- 4 What is meant by 'specific latent heat of vaporization'?  
\_\_\_\_\_ (2)
- 5 What is Boyle's law?  
\_\_\_\_\_ (2)
- 6 What is Charles's law?  
\_\_\_\_\_ (2)
- 7 What is the pressure law?  
\_\_\_\_\_ (2)
- 8 When is a gas no longer regarded as ideal?  
\_\_\_\_\_ (2)
- 9 What evidence is there for the kinetic theory of gases?  
\_\_\_\_\_ (2)
- 10 What is a mole?  
\_\_\_\_\_  
\_\_\_\_\_ (2)

(Total 20 marks)

## CONCEPT TEST

Take  $R = 8.3 \text{ J/(K mol)}$ 

- ① 4.0 kg of copper at  $25^\circ\text{C}$  are heated and increase in temperature to  $80^\circ\text{C}$ ; how much heat energy is required to do this? (Specific capacity of copper =  $380 \text{ J/(kg K)}$ .) Assume no heat is lost to the surroundings.  
\_\_\_\_\_ (2)
- ② A 12 V electric heater draws 2.0 A for 12 min to raise the temperature of a 3.0 kg block of metal. If the initial temperature is  $20^\circ\text{C}$ , what would the final temperature be? Assume no heat is lost to the surroundings. (Specific heat capacity of the metal =  $500 \text{ J/(kg K)}$ .)  
\_\_\_\_\_ (4)
- ③ A car of mass 1400 kg is travelling at 30 m/s. When it applies its brakes, each of mass 26 kg, what will be the increase in the temperature of the brakes? What assumption have you made? (Specific heat capacity of brake material =  $600 \text{ J/(kg K)}$ .)  
\_\_\_\_\_  
\_\_\_\_\_ (4)

- 4 What is the temperature difference between the top and the bottom of the waterfall shown right? Would it be possible to detect this difference? (Take the specific heat capacity of water as  $4200 \text{ J}/(\text{kg K})$ .)

(4)

- 5 200 g of ice at  $0^\circ\text{C}$  are dropped into a copper container of mass 100 g containing 300 g of water at  $21^\circ\text{C}$ . What is the final temperature of the mixture? (Specific heat capacity of copper =  $400 \text{ J}/(\text{kg K})$ , specific heat capacity of water =  $4200 \text{ J}/(\text{kg K})$ , latent heat of fusion of ice =  $3.3 \times 10^5 \text{ J}/\text{kg}$ .)

(6)

- 6  $4.0 \text{ m}^3$  of helium is at a temperature of  $25^\circ\text{C}$  and a pressure of 4.5 kPa. It is compressed to  $1.0 \text{ m}^3$  and heated simultaneously to  $56^\circ\text{C}$ . What is its new pressure?

(4)

- 7  $10 \text{ m}^3$  of a gas is at a pressure of  $2.4 \times 10^4 \text{ Pa}$  and temperature of  $27^\circ\text{C}$ . How many moles of gas are present, how many atoms are present, and what mass of gas is present? (Molar mass of gas =  $0.029 \text{ kg}/\text{mol}$ .)

(6)

- 8 200 g of gas occupies  $3.0 \text{ m}^3$  at a pressure of  $2.0 \times 10^5 \text{ Pa}$ . What is the root mean square speed of the gas's molecules?

(4)

- 9 A runner has just stopped after a race. Perspiration is used by her body (mass 60 kg) to cool her down. If her temperature is dropping by  $0.75 \text{ K}$  per second, what is the rate of evaporation of water? (Take the specific heat capacity of the human body to be the same as water,  $4200 \text{ J}/(\text{kg K})$ , and the latent heat of vaporization to be  $2.4 \times 10^6 \text{ J}/\text{kg}$ .)

(8)

- 10 The graph above right shows a gas changing. Use the information in the graph to see if this change is taking place at a constant temperature (isothermal). The graph below right shows a cyclic process for 4.0 mol of gas. Determine the maximum temperature of the gas during the process.

(8)

(Total 50 marks)

①.  $m_{Cu} = 4 \text{ kg}$   
 $t_1 = 25^\circ\text{C}$   
 $t_2 = 80^\circ\text{C}$   
 $c_{Cu} = 380 \frac{\text{J}}{\text{kg}\cdot\text{K}}$   
 $Q = ? \text{ J}$

$$Q = m_{Cu} c_{Cu} \Delta t = m_{Cu} c_{Cu} (t_2 - t_1) =$$

$$= 4 \times 380 \times (80 - 25) =$$

$$= \underline{\underline{84 \text{ kJ}}}$$

②.  $U = 12 \text{ V}$   
 $I = 2 \text{ A}$   
 $t = 12 \text{ min} = 720 \text{ s}$   
 $m_m = 3 \text{ kg}$   
 $t_1 = 20^\circ\text{C}$   
 $c_m = 500 \frac{\text{J}}{\text{kg}\cdot\text{K}}$   
 $t_2 = ?$

$$P = U \cdot I = 12 \times 2 = 24 \text{ W}$$

$$P = \frac{W}{t} = \frac{Q}{t} \Rightarrow Q = P \cdot t$$

$$m_m c_m (t_2 - t_1) = P \cdot t$$

$$(t_2 - t_1) = \frac{P \cdot t}{m_m c_m}$$

$$t_2 - 20 = \frac{24 \times 720}{3 \times 500}$$

$$t_2 = \underline{\underline{32^\circ\text{C}}}$$

③.  $m_c = 1400 \text{ kg}$   
 $v = 30 \frac{\text{m}}{\text{s}}$   
 $m_f = 26 \times 4 = 104 \text{ kg}$   
 $c_f = 600 \frac{\text{J}}{\text{kg}\cdot\text{K}}$   
 $\Delta t = ? ^\circ\text{C}$

$$E_k = Q$$

$$\frac{1}{2} m_c v^2 = m_f c_f \Delta t$$

$$\frac{1}{2} \times \frac{m_c v^2}{m_f c_f} = \Delta t$$

$$\frac{1}{2} \times \frac{1400 \times 30^2}{104 \times 600} = \Delta t$$

$$\underline{\underline{10^\circ\text{C} = \Delta t}}$$

4.  $h = 400 \text{ mV}$   
 $c_{nr} = 4200 \frac{\text{J}}{\text{kg} \cdot \text{K}}$   
 $\Delta t = ?$   
 $g = 9.8 \text{ m} \cdot \text{s}^{-2}$

$E_p = Q$   
 $m \cdot g \cdot h = m \cdot c_{nr} \Delta t$   
 $\frac{g \cdot h}{c_{nr}} = \Delta t$   
 $\frac{9.8 \times 400}{4200} = \Delta t$

$0.93^\circ\text{C} = \Delta t$

It is impossible to detect this difference!

5.  $m_{i1} = 200 \text{ g} = 0.2 \text{ kg}$   
 $m_{c1} = 100 \text{ g} = 0.1 \text{ kg}$   
 $m_{nr} = 300 \text{ g} = 0.3 \text{ kg}$   
 $t_{nr} = 21^\circ\text{C}$   
 $t_i = 0^\circ\text{C}$   
 $t = ?^\circ\text{C}$   
 $c_{c1} = 400 \frac{\text{J}}{\text{kg} \cdot \text{K}}$   
 $c_{nr} = 4200 \frac{\text{J}}{\text{kg} \cdot \text{K}}$   
 $l_i = 3300 \frac{\text{J}}{\text{kg}}$

$m_{i1} l_i + m_{i1} c_{nr} (t - t_i) =$   
 $= m_{nr} c_{nr} (t_{nr} - t) + m_{c1} c_{c1} (t_w - t)$   
 $0.2 \times 3300 + 0.2 \times 4200(t - 0) =$   
 $= 0.3 \times 4200(21 - t) + 0.1 \times 400(21 - t)$   
 $660 + 840t = 26460 - 1260t + 840 - 40t$   
 $2140t = 26640$   
 $t = 12^\circ\text{C}$
