

Revision of Georelief

Name:.....

Class:.....

Date:.....

1. Define the term Geomorphology.
2. Explain the term georelief.
3. Give 2 examples of inner geomorphological (endogenic) processes.
4. Give 2 examples of outer geomorphological (exogenic) processes.
5. Cross out the unsuitable term.
seismic activity – volcanoes – faulting activity – glacier – folding activity
6. Write 1 difference between limestone and granite.

.....

7. Draw a cross-section of river channel (river valley) and name all the features you can find in it. Use words: *flood-plain, river terrace, river bed*

8. Draw an river profile and name individual parts of the river flow, prevailing geomorphologic process and landform.

Part of the river flow

Geomorphological process

Geomorphological landform

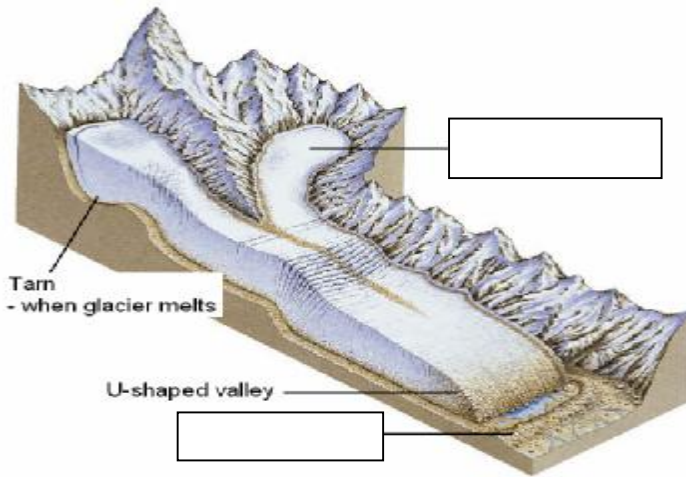

9. Where (in which parts of a flow) can we find a waterfall?
10. Where (in which parts of a flow) can we find a river delta?
11. Meanders can be found usually in:
 upper course of a river middle course of a river lower course of a river

12. What is the karst?
13. Where can we find it in Slovakia?

14. Caves usually occur in:
 granitic karst limestone karst marble karst sandstone karst

15. Draw a cave and all the characteristics you can find in it.

16. Fill blank gaps in the picture.

17. What is the difference between corrie and tarn?

18. Give 3 examples of mountains formed by glaciers.

19. Give an example of a tarns (corrie lake), U-shaped valleys and pyramidal peaks in Slovakia.

Tarns:

U-shaped valleys:

Pyramidal peaks:

20. A moraine is a result of:

melting snow moving glacier moving snow moving target melting glacier

21. Into blank map of the world, mark 2 examples of deserts

22. Give two examples of an artificial sea canal.

.....

23. Burrows are created by:

foxes hawks penguins whales coral people termites

24. List 2 examples of biogenic landforms.

25. List 2 examples of anthropogenic landforms.

26. Where can we find some coral islands?

27. Where is the largest coral reef located in the world?

28. Match the following.

A/ glacial processes	1/ gorge
B/ fluvial processes	2/ termite mounds
C/ karst processes	3/ sandy dunes
D/ biogenic processes	4/ corrie
E/ eolian processes	5/ flood plain of a river

29. Which exogenic geomorphological factor has influenced the formation of relief of the most?

a/ Greenland -

b/ Algeria -

c/ High Tatras -

d/ Bratislava region -
